## ABSTRACT

This submission-style preview is rendered with the imported official Wiley PDF design package. The content remains placeholder text, but the page is intentionally structured as a realistic journal article so front matter, section hierarchy, figure-table rhythm, and bibliography style are easier to inspect.

## 1 | Introduction

The introduction is written as compact technical prose so the preview reads more like a practical Wiley submission than a bare template check page.

## 2 | Related Work

The related-work section is explicit so the preview reveals how literature framing, methods, and experiments separate within the article.

## 3 | Methodology

The methodology section introduces representative mathematics and a figure placeholder so the imported Wiley package can be inspected under more realistic technical content.

$$\mathcal{L} = \sum_{i=1}^{M} w_i \, \|y_i - \hat{y}_i\|_2^2 . \tag{1}$$

## 4 | Experiments

The experiments section provides enough structure to expose table treatment, subsection rhythm, and the transition from methods to quantitative comparison.

### 4.1 | Experimental Setup

This paragraph acts as a placeholder for datasets, experimental conditions, baseline systems, and protocol details.

### 4.2 | Quantitative Results

**TABLE 1** | Quantitative comparison block used to inspect the official Wiley template under realistic submission-style content.

| Method | Score | Time |
|---|---|---|
| Placeholder A | 0.91 | 1.4 |
| Placeholder B | 0.88 | 1.7 |
| Placeholder C | 0.84 | 2.0 |

## 5 | Conclusion and Discussion

This page verifies the imported official Wiley template path while preserving the six-part manuscript skeleton requested for the library.
